

## HealthIE Nevada Emphasizes ‘Connecting to Care’ Among Health Care Providers

*Statewide health information exchange unveils new branding and product offerings  
to better serve health care community.*

**LAS VEGAS** – HealthIE Nevada is the only statewide health information exchange that offers real-time, secure exchange of clinical patient data. To continue growth in connecting the Nevada health care community, it has updated its logo and suite of products and services.

In crafting its new logo, HealthIE Nevada envisioned an icon that would capture its patient-centric approach of collecting and organizing data for treating providers, payers and public health professionals.

HealthIE Chart, HealthIE Images, HealthIE Results, HealthIE Alerts, HealthIE Connect and HealthIE Messaging are services designed to solve workflow issues commonly found in patient care settings. HealthIE Nevada can reduce duplicate testing and improve quality of care. Research shows that by eliminating redundancies, millions of dollars can be saved annually.

“This evolution of our brand coincides with the changing landscape of health information technology,” said Michael Gagnon, executive director of HealthIE Nevada. “With innovation and productive change, we will be more equipped to pursue our goal of providing the right data, to the right provider at the right time to reform the healthcare delivery system.”

The organization’s new tagline, *Connecting to Care*, advances its vision as a fully connected network that improves patient care coordination and provides population health management. HealthIE Nevada serves hospitals, primary care providers, nursing homes and other providers of medical care.

HealthIE Nevada is partnered with more than 70 organizations, including Dignity Health, Renown Health, Valley Health System, University Medical Center of Southern Nevada and Saint Mary’s Regional Medical Center. It continues to grow health information exchange participants.
